

ARCH BAR

An excellent intermaxillary fixation system for facial bone fracture patients.

01

Intermaxillary Fixation System using wires or interdental ligation plates

02

Supports effective jaw immobilization through an easy application method and accurate fixation strength.

03

Offers clinical stability as a non-surgical treatment option

Clinical Case

About ARCH BAR

KJ MEDITECH's Arch bar is a conservative treatment for facial fractures that provides an intermaxillary fixation system using wire or interdental ligation plates.

- Easy implantation arch bar design to simplify wire ligation method
- Design of fixed unit within arch bar frame for root protection
- Screw product composition for arch bar fixation
